32] Sally Salesperson sells shoes part time at Super Shoes in the South Street Mall. She earns a $2 \%$ commission on total sales over $\$ 5,000$, which is paid as a bonus at the end of the year.
Let her total sales be represented by $x . f(x)=x-5000$ and $g(x)=0.02 x$
Which composition of functions would calculate her bonus at the end of the year? $(f \circ g)(x)$ or $(g \circ f)(x)$ ? Explain your reasoning.

33] Sally sold $\$ 9,172$ in shoes this year. Use composition of functions to calculate her bonus. Show work.
